

# Stone Vessel Installation Instructions

## GENERAL INSTRUCTIONS

1. Using an experienced installer is recommended when installing stone sinks.
2. Countertop materials vary and require different cutting methods. Please take this into consideration during installation.
3. Please follow all local plumbing and building codes.
4. Sinks are handmade with slight variations in size. Please use the actual sink when making the installation cutout.
5. Prior to installation, inspect sink for any damage.
6. To protect sink, keep in shipping box until final installation (only remove it to make installation cutout).
7. Santa Fe By Design not responsible for the sink or countertop if any damage occurs during installation.
8. After installation, clean the sink using a mild cleanser and a soft cloth. Do not use harsh cleaners, abrasive pads, or wire brushes. Please refer to the RA Magnus "Care & Maintenance" instructions for full details.

## STONE VESSEL INSTRUCTIONS

1. Place sink into desired position on countertop. Leave proper clearance for faucet, backsplash, and any accessories.
2. Mark drain opening on countertop. Opening will be 3" in diameter (drain size is 1.5" in diameter). NOTE: 1.5" is added to the diameter of the drain opening to determine countertop cutout.
3. Cut countertop opening.
4. Place sink into cutout to test fit. Make sure sink sits level within opening and drain is centered.
5. Clean and then dry countertop opening and underside of sink. Apply a bead of silicone adhesive caulk (not included) to countertop around the opening.
6. Insert sink into opening, keeping drain centered.
7. Install drain (according to manufacturer's instructions).
8. Remove excess caulking and allow adhesive to properly cure.

NOTE: Drain assembly, silicone adhesive caulk, and sink's weight will anchor Stone Vessel sink to countertop.
